

LDAC2024

12th Linked Data in Architecture and Construction Workshop
4th Summer School of LDAC (SSoLDAC)

10 - 14 June 2024
Bochum, Germany

Industry Participation and Sponsoring LDAC2024

The Linked Data in Architecture and Construction (LDAC) Workshop and Summer School brings together experts and researchers on this topic and welcomes a broad spectrum of participants from diverse backgrounds such as **computer science, architecture, and engineering**.

The Summer School, which includes a mixture of lectures, personal interactions with experts in the field, as well as hands-on exercises and coding challenges, gives participants the opportunity to explore the possibilities of the semantic web, linked data and web of data technologies for their own research. This enables them to practice new approaches based on their needs and in their individual pace and depth.

For the first time, the LDAC2024 introduces an “**Industry Fair**” where interested companies from the domain present their developments and expertise at individual booths. Over the two workshop days, representatives from the companies enter into productive dialogue with participants.

LDAC2024 offers organizations several sponsorship possibilities.
